

# PAYMENTS AND TRANSFERS IN BANKING

## Service Scenarios

- Client informs bank branch personnel about payment details;
- Bank personnel identifies the client, enters payment data into the program and prints a form with a unique barcode or number;
- Client scans the barcode on the ATM/Terminal, or enters the number manually;
- Transfer data is displayed on the device for verification;
- Client confirms the correct entry and deposits cash or pays by card.

# ATM CASH WITHDRAWALS WITHOUT A CARD

## Sample service scenario

- Client asks bank consultant to withdraw money from their account;
- Bank consultant identifies client, registers transaction in the program, and prints out a barcode or number;
- A one-time password (OTP) is sent to the client's phone to confirm the transaction;
- Client scans the barcode or enters the number manually on the ATM.

## Sample service scenario

- Processing integration;
- Support for eKassir ATM API by ATM software managers;
- The solution can be utilized by both smartphone software and by bank consultant software.
